Work Experience

- Synthetic People (Syntera)** Hybrid
Backend Engineer Feb 2026 – Present
 - Platform & backend architecture:** Contributed to Syntera, an end-to-end AI market-research platform (React 19 + FastAPI + PostgreSQL on AWS EKS) letting research teams generate synthetic personas, run simulated interviews/surveys, and export publication-ready reports; built parts of the async backend spanning 24 REST route groups and 60+ service modules over SQLAlchemy 2.0 with Alembic-managed migrations, JWT auth, four-role RBAC, and multi-tenant org/workspace isolation.
 - LLM orchestration:** Built and productionised a multi-provider LLM pipeline (Anthropic Claude, OpenAI, Google Gemini) with Qdrant-backed RAG retrieval, powering synthetic persona generation, report writing, and creative-asset analysis.
 - LLM cost tracking:** Built a unified LLM usage tracking system across 40+ call sites and 3 providers with an append-only audit ledger and per-request token/cost telemetry, giving the product team full visibility into AI spend.
 - Data integrity & deployment:** Fixed a data-integrity bug causing double-counted survey responses in client-facing reports by replacing implicit aggregation with a deterministic module and CI checks; containerized services and deployed to AWS EKS via ECR and GitHub Actions with isolated staging/production namespaces and zero-downtime blue-green deploys.
- OneRootFarm** India
Backend Engineer Jul 2025 – Feb 2026
 - API performance optimization:** Reduced API latency by 52% (p95: 480ms to 230ms) by eliminating N+1 ORM queries, adding composite database indexes, and switching to cursor-based pagination.
 - Event-driven architecture:** Designed an event-driven notification pipeline using RabbitMQ, Redis, and NestJS Events, decoupling 3 core services with at-least-once delivery guarantees.
 - Deployment reliability:** Implemented a Docker-based rollback strategy that cut MTTR (mean time to recovery) from 25 minutes to under 5 minutes.
- Sarva Suvidhaen Private Limited** India
Junior Backend Developer Jan 2024 – Jul 2025
 - RailOps Platform:** Developed and maintained backend APIs for a train management system covering passenger charting, linen distribution, and real-time feedback.
 - API Development:** Built RESTful APIs for supervisor complaint handling workflows, improving operational efficiency and response time.
 - Backend Implementation:** Delivered secure, scalable backend services with optimized database queries using Django and PostgreSQL; built idempotent microservices with Redis-backed deduplication for exactly-once-style billing, improving data accuracy by 30%.

Skills Summary

- Languages:** Python, JavaScript, TypeScript
- Backend:** FastAPI, Django, Node.js, NestJS, REST APIs, WebSockets, AsyncIO, SQLAlchemy 2.0, Alembic
- Databases:** PostgreSQL, MySQL, Redis, Vector Databases (Qdrant)
- AI & LLM:** LLM Integrations (Anthropic Claude, OpenAI, Google Gemini), RAG, Prompt Engineering, Agentic Workflows, Tool Calling, XGBoost/LightGBM/CatBoost
- Tools & Platforms:** AWS (EC2, RDS, S3, EKS, ECR), Docker, Kubernetes, GitHub Actions, Grafana, Prometheus, Git

Highlighted Projects

- MedShop – Multi-Tenant Medical SaaS:** Multi-tenant pharmacy management platform with row-level tenancy, RBAC, and expiry-aware inventory.
Contributions: Row-level multi-tenancy enforced at guard, service, and ORM layers; 3-tier RBAC via custom decorators; PostgreSQL SELECT FOR UPDATE locking for concurrent stock deduction; FEFO batch rotation for expiry-aware inventory.
Tech: NestJS, PostgreSQL, Redis, BullMQ, Docker, AWS

Open Source

- opencode – Open-Source AI Coding Agent (129k+ GitHub stars):** Merged fixes in one of GitHub's most-starred developer tools: TUI reconnect failure after OS sleep/lock, diff-view rendering glitch, RPM package naming, Daytona plugin link, and stale doc references. Pull Shark x2 achievement.

Education

- Darbhanga College of Engineering** Darbhanga, India
Bachelor of Technology in Computer Science and Engineering – CGPA: 7.97/10 Aug 2020 – Aug 2024
